

Hair Removal, Electrolysis Preferred

Start ideally 3 months before surgery.

Use anesthesia for higher settings.

Touch ups every 3 weeks times 3.

1. Remove all hair from penile shaft.
2. Remove all hair in a pathway 1" wide around the base of the penis (top, sides, and bottom).
3. Remove all hair from the scrotum.
4. Remove all hair from the perineum, to achieve a hair free vertical strip about 2 1/4" wide.
